

VISHWA KUMAR VENKATESWARAN

+91 9342236718 | vishwakumarv05@gmail.com | LinkedIn | GitHub | Writeups

Bengaluru, Karnataka, India

SUMMARY

Aspiring security researcher with hands-on experience in web application vulnerability analysis, phishing simulation and penetration testing. Active CTF competitor across web, OSINT and forensics. Focused on bug bounty and vulnerability research.

TECHNICAL SKILLS

Languages: C, Python, Java, Bash

Cybersecurity & Networking: Nmap, Burp Suite, Metasploit, Wireshark, Ghidra, CyberChef

Tools & Platforms: Linux, Git, VirtualBox, QEMU, VS Code

Electronics & Embedded: Digital Electronics, Microprocessors, Embedded Systems, Raspberry Pi

EXPERIENCE

Summer Intern | Wimera Systems (Onsite) - Bangalore, Karnataka

May 2026 - Present

- Assisted in ESP32-based IoT device testing and dashboard validation workflows
- Assisted in basic device testing, dashboard monitoring, and documentation tasks
- Assisted in IoT device testing and gained exposure to Matter protocol concepts
- Gained exposure to IoT application development and debugging processes

Machine Learning Intern | SaiKet Systems (Remote) - Bangalore, Karnataka

Jan 2026 – Feb 2026

- Applied machine learning techniques for classification and anomaly detection in security-related datasets
- Performed data preprocessing and model optimization using Python
- Documented workflows and experimental results for reproducibility

Offensive Cyber Security Intern | InLighnX Global Pvt. Ltd. (Remote) - Bangalore, Karnataka

Oct 2025 – Dec 2025

- Completed structured cybersecurity training focusing on offensive and defensive security methodologies
- Developed Python-based security utilities including PDF protection tools and authentication testing framework in controlled lab environments
- Gained hands-on experience with hashing algorithms (MD5, SHA), network protocols, password cracking techniques, and secure coding practices
- Performed vulnerability assessment exercises and applied penetration testing concepts in supervised scenarios

PROJECTS

DEADPIXEL | Phishing Simulation Research Tool

Feb 2026 - May 2026

- Built a phishing simulation toolkit for controlled cybersecurity demonstrations and security awareness testing
- Developed tunnel-based hosting workflows and customizable web templates using Bash, PHP, and HTML
- Analyzed browser permission handling and client-side attack surfaces in isolated lab environments
- Focused on ethical security research, social-engineering simulations, and penetration-testing concepts

ReDroid-AI | Reverse Engineering Assistant

Dec 2025 – Feb 2026

- Developed Linux-based tools for static analysis of Android applications
- Built Python utilities for APK extraction, inspection, and vulnerability analysis
- Focused on improving efficiency of reverse engineering and security auditing workflows
- Analyzed application behavior and identified potential security vulnerabilities during static analysis

PuBOT | Embedded Robotics System

Aug 2025 – Oct 2025

- Designed and developed a Raspberry Pi-based embedded system integrating DC motors, ultrasonic sensors, and real-time control
- Implemented hardware-software interfacing for autonomous navigation and obstacle detection
- Built Linux-based control workflows for motor actuation and sensor data processing
- Debugged and optimized system performance through iterative testing and hardware-software integration

TECHNICAL WRITEUPS / CTF EXPERIENCE

ThunderCipher CTF & SillyCTF 2026

- Solved web and OSINT-based CTF challenges involving enumeration, source analysis, and exploitation
- Applied decoding, payload analysis, and debugging techniques to retrieve challenge flags

EDUCATION

PSG College of Technology, Coimbatore

Aug 2023 - June 2027

Bachelor of Engineering in Electronics and Communication Engineering

Certifications: Android Bug Bounty Hunting (EC-Council), Cybersecurity Assessment, Kotlin Assessment, BASH Training, Arduino Development

Languages: Tamil (Native), English (Professional Working), Hindi (Professional Working), Kannada (Limited Working)
